                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Amino-acid biosyntheeTs; Aromatic amino acid biosynthesis; Lyase; Pyridoxal phosphate; Tryptophan biosynthesis.
Larimer F., Land M.;
"Annotation of the draft genome of Marinobacter aquaeolei VTB.";
Submitted (OCT-2005) to the EMBL/GenBank/DDBJ databases.
-!- CAUTION: The sequence shown here is derived from an
EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
preliminary data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pseudomonas syringae pv. phaseolicola.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hoffman N.E., Ko K., Milkowski D., Pichersky E.;
"Isolation and characterization of tomato cDNA and genomic clones encoding the ubiquitin gene ubi3.",
Plant Mol. Biol. 17:1189-1201(1991).
-!- MISCELLANEOUS: This ribosomal protein is synthesized as a Cterminal extension protein (CEP) of ubiquitin.
-!- SIMILARITY: Belongs to the ribosomal protein S27Ae family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Cellular retinoic acid-binding protein 2.
/FTId=PRO 0000067417.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bacteria; Proteobacteria; Deltaproteobacteria; Desulfovibrionales; Desulfovibrionaceae; Desulfovibrio.
Endocrinology 136:2730-2740(1995).

-!- FUNCTION: Cytosolic CRABPs may regulate the access of retinoic acid to the nuclear retinoic acid receptors. CRABP2 may participate in a regulatory feedback mechanism to control the action of retinoic acid on cell differentiation.

-!- SUBCELLULAR LOCATION: Cytoplasm.
-!- SIMILARITY: Belongs to the fatty-acid binding protein (FABP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US DOE Joint Genome Institute;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         preliminary data.
FUNCTION: Repressor involved in choline regulation of the bet genes (By similarity).
PATHWAY: Betaine biosynthesis from choline; regulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Darimer F., Land M.;
"Annotation of the draft genome of Marinobacter aquaeolei VT8.";
Submitted (OCT-2005) to the EMBL/GenBank/DDBJ databases.
-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-DEC-2005, integrated into UniProtKB/TrEMBL.
